

# Alaska Soil Orders Word Find

Soils are divided by type into 12 major groups, called orders. Seven of these orders of soils occur in Alaska: Andisols, Entisols, Gelisols, Histosols, Inceptisol, Mollisols and Spodosols. Within each of the orders, there are different soil series that have names, often named for places or sometimes people. Alaska's state soil is named for a major river in Interior Alaska. In the list of puzzle words, those in lower case are soil-related words; those in all capitals are the soil orders; those in initial capitals are Alaska soil series names. Solve the puzzle to learn the name of Alaska's State Soil.
